SUMMARY

Software Engineer with experience in frontend and backend development for web applications and mobile applications, including full-stack solutions using Flutter and JavaScript-based frameworks. Hands-on experience building and integrating APIs, as well as ML-assisted data pipelines using Python, Pinecone embeddings, vector search, and LLM-based extraction. Strong background delivering production features in payments, reservations, and analytics-driven applications.

SKILLS

- **Technical Skills:** JavaScript, TypeScript, Dart (Flutter), Python, SQL, NoSQL, HTML, CSS
- **Frameworks:** Flutter, React, Node.js, NestJS, Express, Prisma, Supabase, PostgreSQL
- **Tools & Practices:** Git, Docker, Linux, REST APIs, Authentication, Agile/Scrum

EXPERIENCE

Software Engineer

June 2024 – Present

Merkuria

Remote

- Developed and shipped payment and reservation features in Flutter by integrating Stripe and optimizing API workflows, improving transaction reliability for over 3,000 monthly users.
- Improved performance and reduced UI bugs by refactoring state-management logic and debugging Flutter–NestJS inconsistencies.
- Enhanced user experience by redesigning reservation flows and fixing data-sync issues across frontend and backend services.
- Collaborated in Agile sprints, participating in code reviews, technical planning, and production releases.
- Designed and implemented a Python-based ML-assisted pipeline to extract structured refrigeration product data from unstructured PDFs using Pinecone embeddings, vector search, and LLM parsing.
- Built modular stages for PDF ingestion, retrieval, field extraction, and validation, enabling consistent processing across 15 heterogeneous product documents.
- Optimized pipeline performance by batching embedding requests, reducing token usage, and minimizing repeated PDF processing.

Software Engineer Intern

March 2024 – June 2024

Laboratorio de Software Libre Zacatecas

Remote

- Implemented frontend and backend improvements, enhancing system functionality and user experience.
- Debugged API issues using logging, testing workflows, and step-by-step isolation techniques.
- Used Linux, Git, Docker, and scripting to support development pipelines.
- Collaborated with stakeholders to gather requirements and validate feature design.

PROJECTS

Riesgo Suicida App (Flutter & Supabase) — Risk Assessment

2024

- Built a Flutter app to evaluate suicide risk using validated questionnaires, supporting early-warning detection for university students.
- Implemented automated scoring and risk classification in Flutter, improving assessment accuracy.
- Created Supabase SQL views to aggregate questionnaire data and generate real-time summaries.

CASE University Questionnaire System (Flutter & Supabase)

2024

- Developed a Flutter application to collect and process university questionnaires, reducing manual workload.
- Implemented automatic statistical calculations to generate percentages, charts, and summaries instantly.
- Built Supabase SQL views to aggregate responses and provide real-time analytics.

EDUCATION

Universidad Autónoma de Zacatecas

Zacatecas, México

Bachelor's Degree in Software Engineering (Honors) | GPA: 3.9

Aug 2020 – April 2025

– **Relevant Coursework:** Algorithms, Data Structures, Database, Object-Oriented Programming, Software Programming, Web/Mobile Development, Container Architecture (Docker), User Interface Design, Testing, Software Quality Assurance

Centro de Estudios Tecnológicos Industrial y de Servicios 113

Zacatecas, México

Technical Degree in Software

HONOURS AND AWARDS

Graduated with Honors (Top of Cohort) · TOEFL 643/677 (High English Proficiency)

2025
